

(x, y)
 (k, d)
 $\downarrow$
 $load() \leftarrow x$
 $y \rightarrow E(A, Ne)$

Training pattern

$D(X, Y)$
↑
(labelled data) → G

(eg) $D(\underline{x})$

Supervised training *

✓ (i) classification

- Binary classifier
✓ $Y \in \{\text{lion, dog}\}$
- Multi-class classification

$D(X, Y)$
↑
(Real) → G

✓ (ii) Regression

✓ Unsupervised training *

(eg) (i) Clustering Algorithm
→ k-means ✓

✓ (ii) PCA (Principal Component Analysis)

Example

eyes etc

(Lion/dog)

email ↓ cost ↑ → Best set of learners → a

Distance based Approach

kNN Algorithm

Sklearn

Int (odd)

$k=?$

odd number
classification

$k=4$

① distance

② sort it ($K \leq N \cdot N$)

③ classification

→ majority voting

↳ $K=4$

→ Yes → 2
→ No → 2

50-50
